Instructions for use - Distance chart

This chart should be placed 6m (20 feet) away. The ability to read the second bottom line which is the 20/20-6/6 line is generally regarded as the line that an average person with normal vision can see comfortably. However, if you are long-sighted you may be able to read this line but still require glasses, long sighted people often can see clearly particularly in the distance, but because their eyes have to work harder than average they get tired. If you are having difficulty reading normal newsprint, you should come and have your eyes tested.
